Mathematical Puzzles to Confound and Delight

MWW 21: SOLUTION

This is the same puzzle as MWW2, the construction of the *Partition Numbers*. Instead of each set of bricks being stacked highest to lowest from left to right, the stacks are placed to allow a winding right/left path. (To do this think in terms of rows instead. Put the longest row of blocks on the bottom, then next longest row of blocks on top and as far to the right as possible, the next longest row on top of that, as far to the left as possible, and so on.)
